SAFETY INSTRUCTIONS AND REGULATORY NOTICES

Before you start installation or use of this product, carefully read these instructions!
When using this product, always follow the basic safety precautions to reduce the risk of fire, electric shock and injury to persons, including the following:

- Always install the product as described in the documentation that is included with your product.
- Avoid using this product during an electrical storm. There may be a remote risk of electric shock from lightning.
- Do not use this product to report a gas leak in the vicinity of the leak.

Directive

Unless express and prior approval by Technicolor in writing, you may not:

- Disassemble, de-compile, reverse engineer, trace or otherwise analyse the equipment, its content, operation, or functionality, or otherwise attempt to derive source code (or the underlying ideas, algorithms, structure or organization) from the equipment, or from any other information provided by Technicolor, except to the extent that this restriction is expressly prohibited by local law.
- Copy, rent, loan, re-sale, sub-license, or otherwise transfer or distribute the equipment to others.
- Modify, adapt or create a derivative work of the equipment;
- Remove from any copies of the equipment any product identification, copyright or other notices;
- Disseminate performance information or analysis (including, without limitation, benchmarks) from any source relating to the equipment. Such acts not expressly approved by Technicolor will result in the loss of product warranty and may invalidate the user’s authority to operate this equipment in accordance with FCC Rules.

Technicolor disclaims all responsibility in the event of use that does not comply with the present instructions.

Environmental information

The batteries use some hazardous substances which pollute the environment. Do not dispose of them with other articles. Take care to dispose them at special collecting points.

Safety instructions

Climatic conditions

This product:
- Is intended for in-house stationary desktop use; the maximum ambient temperature may not exceed 40°C (104°F).
- Must not be mounted in a location exposed to direct or excessive solar and/or heat radiation.
- Must not be exposed to heat trap conditions and must not be subjected to water or condensation. Batteries (battery pack or batteries installed) shall not be exposed to excessive heat such as sunshine, fire or the like.
- Must be installed in a Pollution Degree 2 environment (Environment where there is no pollution or only dry, nonconductive pollution).

Cabling

Unplug this product from the wall socket and computer before cleaning. Do not use liquid cleaners or aerosol cleaners. Use a damp cloth for cleaning.

Water and moisture

Do not use this product near water, for example near a bathtub, washbowl, kitchen sink, laundry tub, in a wet basement or near a swimming pool. Transition of the product from dry to wet conditions and vice versa may cause water leakage in your product.

Interface classifications

The external interfaces of the product are classified as follows:

- Phone, TVN circuit, not subjected to over voltages (TVN-2)
- Cable, MoCA, RF, TVN circuit subject to over voltages (TVN-1)
- All other interface ports (e.g. Ethernet, USB, etc.), including the low voltage power input from the AC mains, power supply, SELV circuits.

Electrical powering

The powering of the product must adhere to the power specifications indicated on the marking labels.

USB

The device is to be connected to an identified USB port complying with the requirements of a Limited Power Source.

Accessibility

The plug on the power supply cord serves as disconnect device. Be sure that the power socket outlet you plug the power cord into is easily accessible and located as close to the equipment as possible.

Overloading

Do not overload mains supply socket outlets and extension cords as this increases the risk of fire or electric shock.

Servicing

To reduce the risk of electric shock, do not disassemble this product. None of its internal parts are user-replaceable, therefore, there is no reason to access the interior. Opening or removing covers may expose you to dangerous voltages. Incorrect reassembly could cause electric shock if the appliance is subsequently used. If service or repair work is required, take it to a qualified service dealer.

Damage requiring service

Unplug this product from the wall outlet and refer servicing to qualified service personnel under the following conditions:

- When the power supply or its plug are damaged.
- When the attached cords are damaged or frayed.
- If liquid has been spilled into the product.
- If the product has been exposed to rain or water.
- If the product does not operate normally.
- If the product has been dropped or damaged in any way.
- There are noticeable signs of overheating.
- If the product exhibits a distinct change in performance.

Immediately disconnect the product if you notice it giving off a small smell of burning or smoke. Under no circumstances must you open the equipment yourself; you run the risk of electrocution.

Regulatory information

You must install and use this device in strict accordance with the manufacturer’s instructions as described in the user documentation that is included with your product. Before you start installation or use of this product, carefully read the contents of this document for device specific constraints or rules that may apply in the country where you want to use this product.

In some situations or environments, the use of wireless devices may be restricted by the proprietor of the building or responsible representative of the organization. In such cases, you must comply with that restriction. The manufacturer is not liable for failure to comply with this requirement.

If you are uncertain of the policy that applies on the use of wireless equipment in a specific organization or environment (e.g. airports), you are encouraged to ask for authorization to use this device prior to turning on the equipment.

Technicolor is not responsible for any radio or television interference caused by unauthorized modification of the device, or the substitution or attachment of connecting cables and equipment other than specified by Technicolor. The correction of interference caused by such unauthorized modification, substitution or attachment will be the responsibility of the user.

Technicolor and its authorized resellers or distributors are not liable for any damage or violation of government regulations that may arise from failing to comply with these guidelines.

North-America - United States of America

Important safety instructions

- The cable distribution system should be grounded (grounded) in accordance with ANSI/NFPA 70, the National Electrical Code (NEC), in particular Section 820.97, Grounding of outer Conductive Shield of a Coaxial Cable.
- Leave 5 to 8 cm (2 to 3 inches) around the product to ensure proper ventilation to it.
- Never push objects through the openings in this product.

Federal Communications Commission (FCC) radio frequency interference statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference received, including interference that may cause undesired operation.

RF-exposure statement

When the product is equipped with a wireless interface, then it becomes a mobile or fixed mounted modular transmitter and must have a separation distance of at least 20 cm (8 inches) between the antenna and the body of the user or nearby persons. In practice, this means that the user or nearby persons must have a distance of at least 20 cm (8 inches) from the modem and must not lean on the modem in case it is wall-mounted.

With a separation distance of 20 cm (8 inches) or more, the MPE (maximum permissible exposure) levels are well below the potential this module is capable to produce. For operation within 5.15 - 5.25 GHz frequency range, it is restricted to indoor environment. This device meets all the other requirements specified in Part15E, Section 15.407 of the FCC Rules. This transmitter must not be co-located or operating in conjunction with any other antenna or transmitter.

Restricted frequency band

This product is equipped with an IEEE802.11b/IEEE802.11g/IEEE802.11n wireless transceiver and may only use channels 1 to 11 (2412 to 2462 MHz) on U.S.A. territory.

About this Setup and User Guide

In this Setup and User Guide

The goal of this Setup and User Guide is to show you:

- Set up your Gateway and local network
- Configure and use the main features of your Gateway.

For more advanced scenarios and features visit the documentation pages on www.technicolor.com.

Used symbols

- The danger symbol indicates that there may be a possibility of physical injury.
- The warning symbol indicates that there may be a possibility of equipment damage.
- The caution symbol indicates that there may be a possibility of service interruption.
- The note symbol indicates that the text provides additional information about a topic.

Terminology

Generally, the MediaAccess TC8305C will be referred to as Gateway in this Setup and User Guide.

Typographical conventions

Following typographical convention is used throughout this manual:

- This sample text indicates a hyperlink to a Web site.
  
  Example: For more information, visit us at www.technicolor.com.

- This sample text indicates an internal link.
  
  Example: If you want to know more about guide, see “About this Setup and User Guide” on page 1.

- This sample text indicates an important content-related word.
  
  Example: To enter the network, you must authenticate yourself.

- This sample text indicates a GUI element (commands on menus and buttons, dialog box elements, file names, paths and folders).
  
  Example: On the File menu, click Open to open a file.
1 Getting started

Introduction

This chapter gives you a brief overview of the main features and components of the Gateway. After this chapter we will start with the installation.

⚠️ Do not connect any cables to the Gateway until instructed to do so.
1.1 Features at a glance

Introduction
This section provides a brief overview of the main features of your Gateway.

IPv6 Ready
Your Gateway is IPv6 ready. Internet Protocol version 6 (IPv6) is the next generation of Internet technologies aiming to effectively support the ever-expanding Internet usage and functionality, and also to address security concerns that exist in an IPv4 environment.

Internet connection features
- **Broadband access** via the integrated DOCSIS 3.0 (8x4) Cable Modem
- **Parental control** allows you to restrict access to specific websites, services or your network. For more information, see “5.1 Parental control” on page 34.
- The Gateway has an **integrated firewall** to protect you from malicious attacks. For more information, see “5.2 Firewall” on page 41.
- **Advanced network tools** like port forwarding, port triggering and DMZ. For more information, see “6 Advanced configuration” on page 43.

Local networking features
- **Wireless access** for your local network devices via the integrated IEEE 802.11b/g/n 2.4 GHz wireless access points. For more information, see “2.4 Connect your wireless devices” on page 17.
- **Wired access** for your local network devices via the Ethernet interface. For more information, see “2.3 Connect your wired devices” on page 16.

Telephony features
- The Gateway offers **connectivity for traditional phones** and IP phones.

Battery backup (sold separately)
When the power is down the Gateway will automatically switch to the integrated rechargeable battery, if you purchased a battery. This guarantees that the following functions will not be impacted:
- The connected phones
- All voice-related features

Easy configuration
The **Admin Tool** allows you to configure your Gateway and network via your web browser. For more information, see “3 Admin Tool” on page 25.
1.2 Getting to know the Gateway

This section introduces you to the different components of the Gateway:

<table>
<thead>

</tr>
</tbody>
</table>
1.2.1 Front panel

Introduction

On the front panel of your Gateway, you can find a number of LEDs that allow you to check the state of the services offered by the Gateway.

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>The Gateway is powered on from the electrical outlet.</td>
</tr>
<tr>
<td>Blinking</td>
<td>Power failure or running on battery.</td>
</tr>
<tr>
<td>Off</td>
<td>The Gateway is powered off.</td>
</tr>
</tbody>
</table>

Power LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>

<tbody>
<tr>
<td>Solid on</td>
<td>Upstream and downstream channel locked.</td>
</tr>
<tr>
<td>Blinking</td>
<td>Locking upstream or downstream channel.</td>
</tr>
<tr>
<td>Off</td>
<td>The Gateway is powered off.</td>
</tr>
</tbody>
</table>

Online LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>Connected to your service provider’s network.</td>
</tr>
<tr>
<td>Blinking</td>
<td>Connecting to your service provider’s network.</td>
</tr>
<tr>
<td>Off</td>
<td>Not connected to your service provider’s network.</td>
</tr>
</tbody>
</table>
### WiFi LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>One or more wireless clients connected to the access point, no wireless activity</td>
</tr>
<tr>
<td>Blinking</td>
<td>One or more wireless clients connected to the access point, wireless activity.</td>
</tr>
<tr>
<td>Off</td>
<td>The access point is disabled.</td>
</tr>
</tbody>
</table>

### Tel1 LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>The telephone connected to the Tel1 port is on the hook.</td>
</tr>
<tr>
<td>Blinking</td>
<td>The telephone connected to the Tel1 port is off the hook.</td>
</tr>
<tr>
<td>Off</td>
<td>No telephone connected to the Tel1 port.</td>
</tr>
</tbody>
</table>

### Tel2 LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>The telephone connected to the Tel2 port is on the hook.</td>
</tr>
<tr>
<td>Blinking</td>
<td>The telephone connected to the Tel2 port is off the hook.</td>
</tr>
<tr>
<td>Off</td>
<td>No telephone connected to the Tel2 port.</td>
</tr>
</tbody>
</table>

### Battery LED

<table>
<thead>
<tr>
<th>State</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Solid on</td>
<td>Battery level is OK or recharging.</td>
</tr>
<tr>
<td>Blinking</td>
<td>If the Power LED is:</td>
</tr>
<tr>
<td></td>
<td>- Solid on: bad battery</td>
</tr>
<tr>
<td></td>
<td>- Blinking: low battery</td>
</tr>
<tr>
<td>Off</td>
<td>If the Power LED is:</td>
</tr>
<tr>
<td></td>
<td>- Blinking: the battery level is OK.</td>
</tr>
<tr>
<td></td>
<td>- Off: bad battery.</td>
</tr>
</tbody>
</table>
1.2.2 Top panel

WPS button (item A)

The WPS (WiFi Protected Setup) button allows you to add new wireless clients to your local network in a swift and easy way, without the need to enter any of your wireless settings (network name, wireless network key, encryption type).

For more information about WPS, see “2.4.1 How to connect your wireless client via WPS” on page 18.
1.2.3 Back panel

Overview

Reset button (item A)

The **Reset** button allows you to:
- Restart the Gateway.
- Restore the factory defaults of the Gateway.
For more information, see “7.3 Gateway reset and restore options” on page 56.

USB port (item B)

The **USB** port allows you to power or charge a USB device.

Tel ports (item C)

The **Tel** ports allows you to connect a traditional phone or DECT base station to your Gateway.
For more information, see “2.5 How to connect your phone” on page 24.

Ethernet switch (item D)

The Ethernet switch **( )** allows you to connect an Ethernet device (for example, a computer) to your local network. For more information, see “2.3 Connect your wired devices” on page 16.

All Ethernet ports on the Gateway are Gigabit Ethernet ports and have a maximum speed of 1 Gbps (Gigabit per second).
Each Ethernet port has two LEDs:

<table>
<thead>
<tr>
<th>LED</th>
<th>LED status</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left LED (Green)</td>
<td>Solid on</td>
<td>Gigabit Ethernet device connected.</td>
</tr>
<tr>
<td></td>
<td>Blinking</td>
<td>Gigabit Ethernet device connected and sending/receiving data.</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>No Gigabit Ethernet device connected.</td>
</tr>
<tr>
<td>Right LED (Amber)</td>
<td>Solid on</td>
<td>100Mbps/10Mbps device connected.</td>
</tr>
<tr>
<td></td>
<td>Blinking</td>
<td>100Mbps/10Mbps device connected and sending/receiving data.</td>
</tr>
<tr>
<td></td>
<td>Off</td>
<td>No 100Mbps/10Mbps device connected.</td>
</tr>
</tbody>
</table>
Cable port (item E)
The Cable port allows you to connect to your local coax network and the broadband network of your services provider.

Power inlet (item F)
The power inlet (Power) allows you to connect the power cord.
1.2.4 Bottom panel

Product label (item A)

The label on the bottom of the Gateway contains information about your Gateway, like:

- Device information
- Wireless security settings

Battery compartment (item B, optional)

When the power is down the Gateway will automatically switch to the rechargeable battery (if installed). This to guarantee that the following functions will not be impacted:

- The connected phones
- All voice-related features.

⚠️ Do not remove the battery, unless instructed by your service provider.
1.3 Preparing for the installation

Local connection requirements

Wireless connection
If you want to connect your computer using a wireless connection, your computer must be equipped with a WiFi-certified wireless client adapter.

Wired connection
If you want to connect a computer using a wired connection, your computer must be equipped with an Ethernet Network Interface Card (NIC).

Start with the installation
You are now ready to start with the installation of your Gateway, proceed with "Setup" on page 13.
2 Setup

Setup procedure

Complete the following steps to setup the Gateway:

1. Connect your Gateway to your service provider’s network.
   For more information, see “2.1 Connect the Gateway to your service provider’s network” on page 14.

2. Power on the Gateway.
   For more information, see “2.2 Power on the Gateway” on page 15.

3. Connect your wired devices to the Gateway.
   For more information, see “2.3 Connect your wired devices” on page 16.

4. Connect your wireless devices to the Gateway.
   For more information, see “2.4 Connect your wireless devices” on page 17.

5. Connect your phones.
   For more information, see “2.5 How to connect your phone” on page 24.

Optional configuration

After completing the setup procedure, the Gateway is ready for use. Optionally, you can further configure the Gateway to your needs (for example, change the wireless security) using the Gateway’s Admin Tool.

For more information, see “3 Admin Tool” on page 25.
2.1 Connect the Gateway to your service provider’s network

Introduction
This section helps you to connect the Gateway to your service provider’s network.

Connecting the cables
Proceed as follows:
1. Take one end of the coaxial cable and connect it to your cable splitter.
2. Connect the other end to the Cable port of the Gateway.
2.2 Power on the Gateway

Procedure

Proceed as follows:

1. Take the power cord that is included with your Gateway.
2. Connect the small end of the power cord to the **Power** port on the back of the Gateway.
3. Plug the other end of the power cord into an electrical outlet.
4. Wait at least two minutes to allow the Gateway to complete the start up phase.
2.3 Connect your wired devices

Requirements

- Both your network device (for example, a computer, a gaming console, etc.) and Gateway must have a free Ethernet port.
- Your network device must be configured to obtain an IP address automatically. This is the default setting. All Ethernet ports on the Gateway are Gigabit Ethernet ports and have a maximum speed of 1 Gbps (Gigabit per second).

Procedure

Proceed as follows:

1. Take the yellow Ethernet cable that is included in your box.
2. Plug one end of the Ethernet cable into one of the yellow Ethernet ports on the back of the Gateway:

3. Plug the other end of the Ethernet cable into the Ethernet port of your network device.
4. Your network device is now connected to your network. Use the same procedure to connect your other Ethernet devices (computers, network printers and so on).
2.4 Connect your wireless devices

Introduction

The Gateway has an integrated 2.4 GHz access point that allows you to connect wireless devices to your home network.

Procedure

To connect your device via:

- Via WPS, proceed with "2.4.1 How to connect your wireless client via WPS" on page 18.
- By manually entering the settings, proceed with "2.4.2 How to manually connect your wireless client" on page 20.
2.4.1 How to connect your wireless client via WPS

WPS
Wi-Fi Protected Setup (WPS) allows you to add new wireless clients to your local network in a swift and easy way, without the need to enter any of your wireless settings (network name, wireless network key, encryption type).

Requirements

- Your wireless client must support WPS. Check the documentation of your wireless client for this.
  - Windows 8, Windows 7 and Windows Vista Service Pack 1 have native WPS support.
- Your Gateway must use WPA/WPA2-PSK (TKIP/AES) encryption (default encryption) or no encryption. WPS with WEP encryption is not possible.

WPS methods

The following WPS methods are supported by your Gateway:

- Push Button Configuration (PBC):
  You have to put both the wireless client and the Gateway in registration mode by pushing a hardware or software button.

- PIN code entry on the wireless client:
  You have to enter the Gateway’s WPS PIN code on the wireless client. For more information, see “Adding a wireless client using WPS PIN entry on the wireless client” on page 31.

- PIN code entry on the Gateway:
  You have to enter the wireless client’s WPS PIN code on the Admin Tool. For more information, see “Adding a wireless client using WPS PIN entry on the Gateway” on page 32.

Procedure for PBC

Proceed as follows:

1. On the Gateway, press and hold the WPS button for at least 5 seconds and then release it:

2. The WPS button LED starts blinking. This indicates that the Gateway is now searching for wireless clients that are in registration mode. You now have two minutes to start WPS on your wireless client.

3. Start WPS on your wireless client.

4. The Gateway is now exchanging the security settings.

5. Your wireless client prompts you that it is now connected to the access point.
Troubleshooting

If you are having trouble connecting your wireless client via WPS, this may be caused by one of the following reasons:

- **WPS can not be correctly executed:**
  Configure your wireless manually. For more information, see “2.4.2 How to manually connect your wireless client” on page 20.

- **Your wireless client is out of range:**
  If possible move your wireless client closer to your Gateway or use a wireless repeater to extend the range of your wireless network.

- **Another device is interfering on the selected wireless channel:**
  Change the wireless channel of your Gateway. For more information, see “Change the wireless channel” on page 54.
2.4.2 How to manually connect your wireless client

Requirements

- Your network device must be equipped with a WiFi-certified wireless client.
- Your network device must be configured to obtain an IP address automatically. This is the default setting.

Procedure

If you want to connect a computer using the wireless network, configure the wireless client on your computer with the wireless settings printed on the Gateway’s bottom panel label.

To configure these settings on:

- Windows 8, proceed with “How to connect your computer on Windows 8” on page 21.
- Windows 7, proceed with “How to connect your computer on Windows 7” on page 21.
- Windows Vista, proceed with “How to connect your computer on Windows Vista” on page 22.
- Windows XP, proceed with “How to connect your computer on Windows XP” on page 22.
- Mac OS X, proceed with “How to connect your computer on Mac OS X” on page 23.
- On another operating system, consult the help of your wireless client or operating system.
How to connect your computer on Windows 8

1. Click the wireless network icon ( ) in the notification area.
2. A list of available wireless networks appears.
   Double-click the Gateway access point.
   The Gateway is listed with the Network Name (SSID) which is printed on the Gateway’s bottom panel label. For more information, see “Product label (item A)” on page 11.
3. Windows prompts you to enter the security key.
   Type the **Network Key (Password)** which is printed on the Gateway’s bottom panel label in the **Enter the network security key** box and click **Next**.
4. Windows prompts you if it should turn on sharing. Click **Yes**.

How to connect your computer on Windows 7

Proceed as follows:

1. Click the wireless network icon ( ) in the notification area.
2. A list of available wireless networks appears.
   Double-click the Gateway access point.
   The Gateway is listed with the Network Name (SSID) which is printed on the Gateway’s bottom panel label. For more information, see “Product label (item A)” on page 11.
3. Windows prompts you to enter the security key.
   Type the **Network Key (Password)** which is printed on the Gateway’s bottom panel label in the **Security key** and click **OK**.
How to connect your computer on Windows Vista

Proceed as follows:

1. Click Start and click Connect To.
2. A list of available wireless networks appears.
3. Double-click the Gateway access point.

   The Gateway is listed with the Network Name (SSID) which is printed on the Gateway’s bottom panel label. For more information, see “Product label (item A)” on page 11.
4. Windows prompts you to enter the network security key.

   Type the **Network Key (Password)** which is printed on the Gateway’s bottom panel label in the **Security key or passphrase** box and click **Connect**.

How to connect your computer on Windows XP

Proceed as follows:

1. Right-click the wireless network connection icon ( or ) in the notification area and then click View Available Wireless Networks.
2. A list of available wireless networks appears.

   Double-click the Gateway access point.

   The Gateway is listed with the Network Name (SSID) which is printed on the Gateway’s bottom panel label. For more information, see “Product label (item A)” on page 11.
3 Windows prompts you to enter the network security key.

Type the **Network Key (Password)** which is printed on the Gateway’s bottom panel label in the **Network key** and **Confirm network key** box and click **Connect**.

4 You are now connected to the Gateway:

How to connect your computer on Mac OS X

Proceed as follows:

1 Click the **WiFi** icon on the menu bar.

2 A list of available wireless networks appears.

   ![Select Gateway from list](image)

   Select the Gateway from the list. The Gateway is listed with the Network Name (SSID) which is printed on the Gateway’s bottom panel label. For more information, see “Product label (item A)” on page 11.

3 The **WiFi** window prompts you to enter your WPA password.

   ![Enter WPA password](image)

   In the **Password** box, type the **Network Key (Password)** which is printed on the Gateway’s bottom panel label and select the **Remember this network** box and click **OK**.

4 You are now connected to the Gateway network.
2.5 How to connect your phone

Procedure

Connect your traditional phone, external DECT base station or fax to the Te1 port on the back panel of your Gateway.
3 Admin Tool

Introduction
The Admin Tool allows you to configure the settings of your Gateway via your web browser.

Requirements
JavaScript must be enabled on your browser (this is the default setting). For more information, consult the help of your web browser.

Accessing the Admin Tool
Proceed as follows:
1. Open your web browser and browse to http://10.0.0.1.
   On Windows it is also possible to access the Admin Tool using UPnP. For more information, see "6.1.1 UPnP" on page 45.
2. The Gateway prompts you to enter the user name and password. Enter your user name (default: admin) and password (default: password) and click OK.

3 The Admin Tool appears.
## 3.1 Components

### Components overview

The following diagram identifies the sections of the Admin Tool:

![Diagram of Admin Tool sections]

**Menu (item A)**

The menu consists of the following menu items:

- **Gateway**: Provides basic information about the Gateway and allows you to configure the basic settings.
- **Connected Devices**: Allows you to manage the access settings of the devices in your network.
- **Parental Control**: Allows you to manage the access rights for Internet access.
- **Advanced**: Allows you to configure more advanced Internet services.
- **Troubleshooting**: Allows you to perform some basic troubleshooting on the Gateway and network connections.

Each of these items contain a number of sub-menu items.

More detailed information about the pages can be found in the tips section of each page. For more information, see "Tips section (item D)" on page 27.

**Login section (item B)**

In the login section you can see the following details:

- User Name
- Option to logout
- Option to change the Admin Tool password
Status section (item C)
The diagnostics section provides a quick overview of:
- The battery level
- The status of the Internet interface
- The status of the wireless interface
- The selected firewall level

Move your mouse pointer over one of these items to view additional information.

Tips section (item D)
The tips section provides helpful information about the settings displayed on the current page.

To expand the tip, click more.

Content panel (item E)
The content pane displays the actual configuration page.

Online support (item F)
The online support section provides links to the web sites where you can find additional information.
3.2 How to change the default Admin Tool password

We recommend you to change the default password of the Gateway.

The default user name is admin and the default password is password.

Procedure

1 Browse to the Admin Tool.
   For more information, see “Accessing the Admin Tool” on page 25.
2 On the Troubleshooting menu, click Change Password.
3 The Change Password page appears.

![Change Password Page]

4 In the Current Password box, type your current password.

   The default password is password.

5 In the New Password and Re-enter New Password box, type your new password.

   Your new password must be at least 8 characters long. It may include letters or numbers or a combination of both (no symbols). For better security, try using at least one number and a mix of upper and lower case letters.

6 Click SAVE.

7 The Gateway prompts you to login with your new password.
4 The Gateway wireless access point

Introduction
This section will help you set up your wireless network.

What you need to set up a wireless network
To set up a wireless network, you need the following components:

- A Wireless access point (already integrated into your Gateway)
- A Wireless client the device that you want to connect (for example, a computer, smartphone, network printer,...)

Wireless access point
The wireless access point is the heart of your wireless network. The wireless access point:

- Connects different wireless clients.
- Secures the data sent over wireless connection.

The Gateway has a built-in 2.4 GHz access point.

Wireless client
The wireless client allows you to connect a device, typically a computer, to a wireless access point. Both built-in and external (for example via USB) clients are available.

- Devices like tablets and smartphones usually have a built-in wireless client. Check the documentation of your device for more information.
- Check the documentation of your computer if you are not sure if your computer is equipped with a wireless client.

Configuring your wireless clients
For more information on how to establish a wireless connection to the Gateway, see:

- "2.4.1 How to connect your wireless client via WPS" on page 18
- "2.4.2 How to manually connect your wireless client" on page 20
### 4.1 How to configure the wireless settings

1. Browse to the Admin Tool (http://10.0.0.1).
   For more information, see “Accessing the Admin Tool” on page 25.
2. On the Gateway menu, click Connection and then click WiFi.
3. The WiFi page appears. In the Private WiFi Network table, click the EDIT button.
4. The Edit page appears:

   ![Edit page screenshot](image)

   The following fields are available for configuration:

   - **Network Name (SSID):**
     To distinguish one wireless network from another, each wireless network has its own network name, often referred to as Service Set IDentifier (SSID). All your wireless clients on your network must use this network name (SSID).
   - **Mode:**
     The standards that are allowed for wireless communication. Only devices that support one of the selected modes can connect to the Gateway.
   - **Security Mode:**
     The encryption type used to secure your wireless communication. We recommend using the default encryption, WPA/WPA2-PSK (TKIP/AES). Open and WEP are to be avoided for security reasons and should only be used if your wireless client does not support WPA.
   - **Channel Selection:**
     When you select Automatic, the Gateway automatically selects the best channel for your wireless communication.
   - **Channel:**
     The channel that is currently used for your wireless communication.
   - **Network Password:**
     The wireless network key that is used for encrypting your wireless communication.
   - **Broadcast Network Name (SSID):**
     By default, the Gateway broadcasts its network name. Wireless clients can then detect the presence of your network and inform the users that this network is available.

     Enabling SSID broadcast does not mean that everyone can connect to your network. They still need the correct wireless network key (password) to connect to the Gateway network. It only informs them that your network is present.
4.2 How to start a WPS session via the Admin Tool

Adding a wireless client using WPS PBC

1. Make sure that the WPS button of your wireless client is accessible. This button can be a hardware button or a software button.
2. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
3. On the Gateway menu, click Connection and then click WiFi.
4. The WiFi page appears, click ADD WIFI PROTECTED SETUP (WPS) CLIENT.
5. The Add WiFi Client page appears.
6. Click PAIR.
7. Within two minutes, press the PAIR button of your wireless client.

Adding a wireless client using WPS PIN entry on the wireless client

1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. On the Gateway menu, click Connection and then click WiFi.
3. The WiFi page appears, click ADD WIFI PROTECTED SETUP (WPS) CLIENT.
4. The Add WiFi Client page appears.
5. Write down the number displayed in AP PIN.
6. Open WPS Pin page of your wireless client and enter the PIN that you wrote down.
Adding a wireless client using WPS PIN entry on the Gateway

1. Locate and write down the WPS PIN of your wireless client. The WPS PIN is printed on the Gateway’s bottom panel label or accessible from the software.

2. Browse to the Admin Tool.
   For more information, see “Accessing the Admin Tool” on page 25.

3. On the Gateway menu, click Connection and then click WiFi.

4. Click ADD WIFI PROTECTED SETUP (WPS) CLIENT.

5. The Add WiFi Client page appears.

6. In the Connection Options list, select Pin Number.

7. Enter the PIN from your wireless client in the Wireless Client’s PIN box.

8. Click PAIR.
# 5 Internet security

## Overview

The Gateway offers various options to secure your Internet connection:

<table>

</tr>
</tbody>
</table>
5.1 Parental control

Introduction

The parental control function:

- Prevents access to specific website based on the URL or keywords.
  For more information, see "5.1.1 Manage sites" on page 35.

- Prevents access to specific application or services (for example, FTP).
  For more information, see "5.1.2 Manage services" on page 37.

- Prevents devices from accessing your network.
  For more information, see "5.1.3 Manage devices" on page 38.
5.1.1 Manage sites

Introduction

The Managed Sites page allows you to:
- Block specific websites (always or for a specific time frame)
- Block keywords (always or for a specific time frame)
- Mark devices as trusted

When a device is marked as trusted, all Managed Sites rules will be ignored.

How to access the Managed Sites page

1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. On the left menu, click Parental Control.
3. The Managed Sites page appears.
4. In the Enable Managed Sites list, click Enable.

How to block a specific website

Proceed as follows, from the Managed Sites page:
1. Under Blocked Sites, click + ADD.
2. The Add Blocked Domain page appears.
3. In the URL field type the address of the website (for example, facebook.com).
4. If you want this rule only to be applied at specific time frames, click No in the Always Block list and define when to apply the rule:
   a. Under Set Block Time, enter a start time and end time
   b. Under Set Block Days, select the days for which the selected block time should be applied.
      - If you want to have different time schedules depending on the day, you will have to group these in separate rules:
         - One rule for weekdays (for example, access to Facebook from 8:00 PM until 10:00 PM)
         - One rule for the weekend (for example, access to Facebook from 4:00 PM until 10:00 PM).
5. Click SAVE.
How to block websites based on keywords

Proceed as follows, from the Managed Sites page:

1 Under Blocked Sites, click + ADD.
2 The Add Keyword to be Blocked page appears.

3 In the Keyword box type the keyword that you want to block (for example, the webmail keyword will block all URLs that contain the word webmail in the URL).

4 If you want this rule only to be applied at specific time frames, click No in the Always Block list and define when to apply the rule:
   a Under Set Block Time, enter a start time and end time
   b Under Set Block Days, select the days for which the selected block time should be applied.
   
   If you want to have different time schedules depending on the day, you have to group them in separate rules:
   - One rule for weekdays (for example, rule active from 8:00 PM until 10:00 PM)
   - One rule for the weekend (for example, rule active from 4:00 PM until 10:00 PM).

5 Click SAVE.

Mark computers as trusted for all websites

The Gateway will block connections to websites on all untrusted computers, based on the specified rules. If you don’t want restrictions for a particular computer, select Yes under Trusted Computers.
5.1.2 Manage services

**Introduction**

The Managed Services page allows you to:

- Create a service rule to block specific Internet services.
  - Optionally, you can provide a time schedule for a rule. The rule will only be activated within the specified time frame.
- Mark computers as trusted. For trusted computer all service rules will be ignored.

**How to create a service rule**

1. Browse to the Admin Tool. For more information, see "Accessing the Admin Tool" on page 25.
2. On Parental Control menu, click Managed Services.
3. The Managed Services page appears.
4. In the Enable Managed Services list, click Enable.
5. In the Blocked Services table, click + ADD.
6. The Add Service to be Blocked page appears.
7. Complete the following fields:
   - In the User Defined Service box, type a name for the rule (for example, FTP).
   - In the Protocol list, click on the protocol that is used (for example, TCP).
   - In the Start Port box, type the start port of the port range (for example, 21).
   - In the End Port box, type the end port of the port range. If the service only uses one port, enter the same value as in the Start Port box (for example, 21).
   - If the port range is not a contiguous range of numbers, you have to spread them over multiple service rules.
8. If you want this rule only to be applied at specific time frames, click No in the Always Block list and define when to apply the rule:
   - Under Set Block Time, enter a start time and end time
   - Under Set Block Days, select the days for which the selected block time should be applied.
     - If you want to have different time schedules depending on the day, you have to group them in separate rules:
       - One rule for weekdays (for example, block the service from 10:00 PM until 8:00 PM)
       - One rule for the weekend (for example, block the service from 10:00 PM until 8:00AM).
9. Click SAVE.

**Mark computers as trusted for all services**

The Gateway will block connections to websites on all untrusted computers, based on the specified rules. If you don’t want restrictions for a particular computer, select Yes under Trusted Computers.
5 INTERNET SECURITY

5.1.3 Manage devices

On the Managed Devices page you can:

- Create a device rule to prevent a device from accessing your network.
  Optionally, you can provide a time schedule for a rule. The rule will only be activated within the specified time frame.
- Mark computers as trusted. For trusted computers all service rules will be ignored.

Procedure

1. Browse to the Admin Tool.
   For more information, see “Accessing the Admin Tool” on page 25.
2. On the Parental Control menu, click Managed Devices.
3. In the Enable Managed Devices list, click Enable.
4. In the Access Type list, click:
   - Allow All to allow all devices by default. In this case you have to create a rule for each device that you want to block on your network.
   - Block All to block all devices by default. In this case you have to create a rule for each device that you want to allow on your network.

Adding allowed devices

If you selected Block All in the Access Type list, proceed as follows:
1. In the Allowed Devices table, click +ADD ALLOWED DEVICE.
2. The Add Device to be Allowed page appears.
3. Under Set Allowed Device, select your device from the Learned Device(s) list. If your device is not listed, enter the computer name and MAC address under Custom Device.
4. If you want this rule only to be applied at specific time frames, click No in the Always Allow list and define when to apply the rule:
   a. Under Set Allow Time, enter a start time and end time
   b. Under Set Allow Days, select the days for which the selected block time should be applied.

Adding blocked devices

If you selected Allow All in the Access Type list, proceed as follows:
1. In the Blocked Devices table, click +ADD BLOCKED DEVICE.
2. The Add Device to be Blocked page appears.
3. Under Set Blocked Device, select your device from the Learned Device(s) list. If your device is not listed, enter the computer name and MAC address under Custom Device.
4. If you want this rule only to be applied at specific time frames, click No in the Always Block list and define when to apply the rule:
   a. Under Set Block Time, enter a start time and end time.
   Optionally, you can provide a time schedule for a rule. The rule will only be activated within the specified time frame. If you want to have different time schedules depending on the day, you have to group them in separate rules:
   - One rule for weekdays (for example, block the device from 10:00 PM until 8:00 PM)
   - One rule for the weekend (for example, block the device from 10:00 PM until 8:00 AM).
b Under **Set Block Days**, select the days for which the selected block time should be applied.

If you want to have different time schedules depending on the day, you have to group them in separate rules:

- One rule for weekdays (for example, allow the device from 8:00 PM until 10:00 PM)
- One rule for the weekend (for example, allow the device from 8:00 AM until 10:00 PM).

5 Click **SAVE**.
5.1.4 View parental control reports

Introduction

The Reports page allows you to generate reports on possible infringements of the parental control rules.

Procedure

1. Browse to the Admin Tool.
   For more information, see “Accessing the Admin Tool” on page 25.
2. On the Parental Control menu, click Reports.
3. The Report page appears.

   ![Report Filters](image)

   Under Report Filters, select a report type and time frame and click GENERATE REPORT.

4. The Generated report table now lists all log entries.
5. Optionally, you can:
   - Click PRINT to print the log entries.
   - Click DOWNLOAD to save the log entries as a text file.
5.2 Firewall

Introduction

The Gateway comes with an integrated firewall that helps you protect your network from attacks from the Internet. This firewall has a number of predefined levels to allow you to adjust the firewall to your needs.

The default Firewall setting is Minimum Security (Low). This means that all traffic passing through the Gateway (from and to the Internet) is allowed.

Predefined security levels

The Gateway has a number of predefined security levels. The following levels are available:

- **Maximum Security (High):**
  Blocks all the applications including voice applications (such as Gtalk, Skype) and P2P applications. Allows Internet browsing, email, VPN, DNS and iTunes services.
  
  Although BlockAll will block all connections, some mandatory types of traffic such as DNS will still be relayed between LAN and WAN by the Gateway.

- **Typical Security (Medium):**
  Blocks P2P applications and Ping to the Gateway, allows all other traffic.

- **Minimum Security (Low):**
  Allows all secure applications. This is the default configuration.
  
  The firewall levels only have impact on traffic passing through your Gateway. This means that the handling of traffic directly appointed from and to the Gateway is independent of the selected firewall level.

- **Custom Security:**
  Allows you to create your own security level.

Changing the security level

Proceed as follows:

1. Browse to the Admin Tool. For more information, see "Accessing the Admin Tool" on page 25.
2. On the Gateway menu, click Firewall.
3. The Firewall page appears. Under Firewall Security Level, select one of the predefined levels or select Custom Security to create a custom level.
4. Click SAVE SETTINGS.
6 Advanced configuration

Introduction

This chapter covers the more advanced features. The following topics are available:

</tr>
</tbody>
</table>
6.1 Port configuration for applications and services

Introduction
The Gateway allows you to use one Internet connection for multiple computers. This means that all your computers share one public IP address, as if only one computer were connected to the outside world.

Issue
When the Gateway receives an incoming message, the Gateway has to decide to which computer it has to send this message.

If the incoming message is a response to an outgoing message originating from one of your computers, the Gateway sends the incoming message to this computer.

But the Gateway will not be able to resolve the destination if:

- The incoming message arrives on a different port as the outgoing message. Then the Gateway will not know that the two messages are related.
- There is no outgoing message.

Solutions
To avoid this problem, the Gateway offers the following solutions:

- The Gateway supports automatic device discovery and port configuration for UPnP-enabled devices. For more information, see “6.1.1 UPnP” on page 45.
- The Gateway allows you to assign a port to a device. For more information, see “6.1.2 Port forwarding” on page 47.
- The Gateway allows you to define a number of trigger ports. When a device sends data over one of these ports, the Gateway will automatically assign a number of related ports to the device. For more information, see “6.1.3 Port triggering” on page 49.
6.1.1 UPnP

Introduction

UPnP is designed to automate the installation and configuration of a (small) network as much as possible. This means that UPnP-capable devices can join and leave a network without any effort of a network administrator.

Supported operating systems

The following operating systems support UPnP:

- Windows 8
- Windows 7
- Windows Vista
- Windows XP

⚠️ If your computer is running Windows XP, you first have to install the UPnP component. For more information, see Windows help.

UPnP and the Gateway

UPnP offers you the following functions:

- You do not have to manually create port mappings to run services on a computer. The automatic port configuration mechanism for UPnP-enabled games and applications will do this for you. If the application is UPnP-enabled, UPnP will create these entries automatically.
- You can access the Admin Tool without having to remember the address of the Gateway.

Enable UPnP on the Gateway

1. Browse to the Admin Tool.
   For more information, see Admin Tool.
2. On the Advanced menu, click Device Discovery.
3. The Device Discovery page appears.

   ![Device Discovery](image)

   In the Enable UPnP list, select Enabled.
4. Click SAVE.

How use UPnP to access your Gateway on Windows 7/Vista

If your computer runs Windows 7/Vista:

1. On the Windows Start menu, click Computer.
2. An Explorer window appears. In the panel, click Network.
3 If Explorer prompts you that network discovery and/or file sharing are turned off, click on the message and turn it on.

4 Right-click Technicolor TC8305C and click View device web page.
5 The Admin Tool appears.

How use UPnP to access your Gateway on Windows XP

If your computer runs Windows XP:
1 Go to My Network Places.
2 The My Network Places window appears:
3 Double-click Technicolor TC8305C.
4 The Admin Tool appears.
6.1.2 Port forwarding

Introduction
Port forwarding allows you to forward incoming Internet traffic arriving on a specific port to an internal IP address. For example: if you are running a web server and the Gateway receives a request on port 80, this request should be forwarded to your web server.

Use a reserved IP address
The target device of the port forwarding rules will be specified by an IP address. Make sure that your device uses a fixed IP address. If you do not do this, the device might get a new IP address after some time and the port forwarding rule will no longer be applied to the device. For more information, see 6.2 Assigning a reserved IP to a device.

Procedure
Proceed as follows to do so:
1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. On the left menu, click Advanced.
3. The Port Forwarding page appears.
4. The Add Service page appears.
5. In the Common Services list, click the service you want to run on the computer or click Other if the service is not listed.
6. If you clicked Other, complete the following fields:
   - In the Other Service box, type a name for the services that you want to configure.
   - In the Service Type list, click the protocol that is used by the service.
   - In the Starting Port box, type the start port number of the port range.
   - In the End port box, type the last port number of the port range. If you only want to specify one port, use the same number as in the Starting Port box.
7. In the Service IP address box, type the IP address of the computer to which you want to assign the service.
8. Click ADD.
Your service is now listed in the Port Forwarding table. All incoming requests for the selected service will now be directed to the selected device. The Gateway will also configure its firewall to allow this service.
6.1.3 Port triggering

Introduction

Port triggering allows you to define a set of dynamic port forwarding rules that will be activated as soon as a device sends traffic to the Internet over a specific port(s), the trigger port(s).

The difference compared to the port forwarding function described in "6.1.2 Port forwarding" on page 47 is that:

- Port triggering rules will only be activated if a local device is sending traffic over one of the trigger ports. So there must be outbound traffic first.
- Port triggering rules forward the traffic to any device that has initiated the communication while port forwarding forward a fixed IP.
- Port triggering rules allow you to translate the port numbers. This means that the incoming port can differ from the target port.

Procedure

1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. On the Advanced menu, click Port Triggering.
3. The Port Triggering page appears.
4. In the Enable Port Forwarding list, click Enabled. In the Port Triggering table, click +ADD PORT TRIGGER.
5. The Add Port Trigger page appears.

Complete the following fields:

- In the Service Name box, type a name for the rule (for example, FTP).
- In the Service Type list, click on the protocol that is used (for example, TCP).
- In the Trigger Port From box, type the start port number of the trigger port range.
- In the Trigger Port To box, type the end port number of the trigger port range. If you only want to specify one port, use the same number as in the Trigger Port From box.
- In the Target Port From box, type the start port number of the target port range.
- In the Target Port To box, type the end port number of the target port range. If you only want to specify one port, use the same number as in the Target Port From box.

6. Click ADD.

Your service is now listed in the Port Triggering table. All incoming requests for the selected service will now be directed to the selected device. The Gateway will also configure its firewall to allow this service.
6.1.4 Configure a DMZ Host

Introduction

The Gateway allows you to configure one local device as a De-Militarized Zone (DMZ) host. This means that:

- None of the Gateway firewall rules will be applied to this device.
- All traffic originating from the Internet will be forwarded to this device unless there is a port forwarding rule defined for this type of traffic. Port forwarding rules always have higher priority.

Use a reserved IP address for the DMZ host

Make sure that your DMZ host uses a fixed IP address. If you do not do this, the device might get a new IP address after some time and the port forwarding rule will no longer be applied to the device and another device may suddenly be acting as DMZ host. For more information, see 6.2 Assigning a reserved IP to a device.

How to configure a device as DMZ host

1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. On the Advanced menu, click DMZ.
3. The DMZ page appears:

Complete the following fields:

- In the Enable DMZ list, click Enabled.
- In the DMZ Host box, type the IP address of the device.
4. Click SAVE.
6.2 Assigning a reserved IP to a device

Introduction

By default, each device will get an IP address from the Gateway’s DHCP server. When a device leaves, is turned off or the lease time of the address has expired, the IP address becomes available and can be re-used for other devices.

When you want to run a service on a network device (for example, a web server, network printer, etc.), it is advised to assign a reserved IP to the device. This way, the device will always be reachable on the same address and there is no risk that you are accessing the wrong device.

How to assign a reserved IP

Proceed as follows to do so:

1. Browse to the Admin Tool.
   For more information, see “Accessing the Admin Tool” on page 25.
2. On the left menu, click Connected Devices.
3. The Devices page appears. If:
   - Your device is already listed in one of the tables, proceed as follows:
     1. Click Edit.
     2. The Edit Device page appears.
     3. In the Configuration list, click Reserved IP.
     4. If needed, change the value in the Reserved IP Address box.
   - Your device is not listed, proceed as follows:
     1. On the Device, click ADD DEVICE WITH RESERVED IP.
     2. The Add Device page appears.
     3. Enter the settings of your choice.
     4. Click Save.
7 Support

Introduction

This chapter suggests solutions for issues that you may encounter while installing, configuring or using your Gateway. If the suggestions do not resolve the problem, look at the support pages on www.technicolor.com or contact your service provider.

Topics

This chapter describes the following topics:

<table>

7.1 Wireless connection troubleshooting

No wireless connectivity

Try the following:
- Make sure that the wireless client is enabled (message like "radio on").
- Make sure that the wireless client is configured with the correct wireless settings (Network Name, security settings).
- If the signal is low or not available, try to reposition the Gateway or (if available) redirect the antenna(s) of the Gateway for optimal performance.
- Change the wireless channel.

Poor wireless connectivity or range

Try the following:
- Check the signal strength, indicated by the wireless client manager. If the signal is low, try to reposition the Gateway or (if available) redirect the antenna(s) of the Gateway for optimal performance.
- Change the wireless channel.
- Use WPA2-PSK (TKIP/AES) as encryption. For more information, see “4.1 How to configure the wireless settings” on page 30.

Change the wireless channel

Proceed as follows:
1. Browse to the Admin Tool. For more information, see “Accessing the Admin Tool” on page 25.
2. Under Gateway, click Connection and then click WiFi.
3. The WiFi page appears. Click the EDIT button.
4. The Edit page appears.
5. In the Channel Selection list, click Manual.
6. In the Channel list, click on one of the channels.
7. Click SAVE SETTINGS.

Cannot connect via WPS

If you are having trouble connecting your wireless client via WPS, try to configure it manually. For more information, see “2.4.2 How to manually connect your wireless client” on page 20.
7.2 Network diagnostic tools

Introduction

The Admin Tool offers a number of diagnostics tools to test your network connectivity.

How to access the network diagnostics tools

1. Browse to the Admin Tool.
   For more information, see "Admin Tool" on page 25.
2. On the Troubleshooting menu, click Diagnostic Tools.
3. The Network Diagnostic Tools page appears. The following tools are available:
   - Test Connectivity Results
   - Check for IPV4 Address Results
   - Check for IPV6 Address Results
7.3 Gateway reset and restore options

Reset
By performing a reset you will restart a specific set of services (or the complete Gateway).

Restore
By performing a restore you will reset a specific set of services (or the complete Gateway) and reapply their factory default settings.

⚠️ A reset to factory default settings deletes all configuration changes you made. Therefore, after the reset a reconfiguration of your Gateway will be needed.

Also your wireless clients will have to be re-associated, as described in "2.4 Connect your wireless devices" on page 17.

Methods
You can choose between:
- Performing a reset/restore via the Admin Tool.
  With this method you can choose to only reset/restore a specific module of the Gateway or perform a complete reset/restore of the Gateway.
- Reset/restore the Gateway via the Reset button
  With this method you can only perform a complete reset/restore of the Gateway

Performing a reset/restore via the Admin Tool
Proceed as follows:
1 Browse to the Admin Tool.
   For more information, see "3 Admin Tool" on page 25.
2 On the Troubleshooting menu, click Reset/Reboot Gateway.
3 The Reset/Reboot Gateway page appears. Click:
   - RESET to restart the Gateway.
   - RESET WIFI MODULE to restart just the WiFi module only.
   - RESET WIFI ROUTER to restart the WiFi and router modules.
   - RESTORE WIFI SETTINGS to activate the Gateway default settings for WiFi only. Only your WiFi settings will be lost.
   - RESTORE FACTORY SETTINGS to activate all Gateway default settings. All your previous settings will be lost.
4 The Gateway prompts you to confirm your choice. Click OK.
5 If you selected Restore Factory Settings, the Gateway will restart. In all other cases, no restart is needed.

Reset/restore the Gateway via the Reset button
Proceed as follows:
1 Make sure that the Gateway is turned on.
2 If you want to:
   - Reset the Gateway, use a pen or an unfolded paperclip to push the recessed Reset button on the back panel of the Gateway for approximately 5 seconds and then release it.
> Restore the factory default settings of the Gateway, use a pen or an unfolded paperclip to push the recessed **Reset** button on the back panel of the Gateway for at least 15 seconds and then release it.

3 The Gateway restarts.
