

# Unlock your xFi experience

Manage, secure and control your in-home WiFi from any device, at any time.

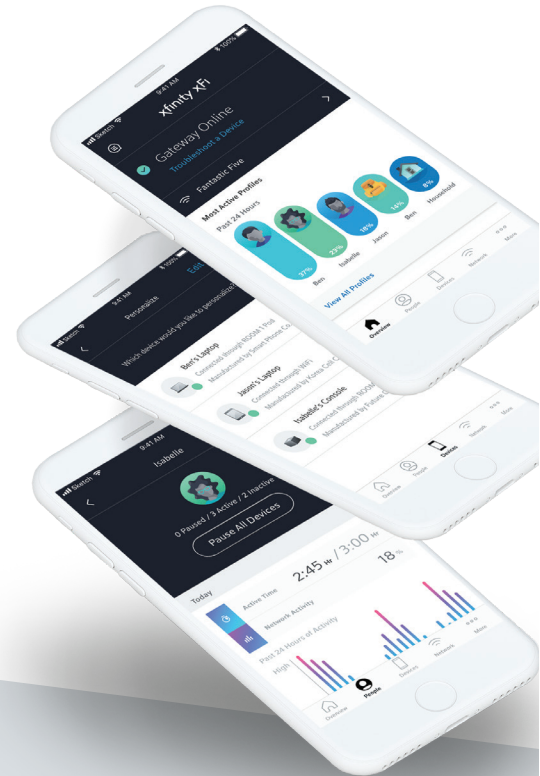

## Take control of your home WiFi network:

- Personalize your network with family profiles
- View and manage connected devices
- Easily access and change your WiFi name and password
- Set bedtime mode, pause WiFi access and enjoy even more parental controls
- Get help and support including troubleshooting tools

xFi lets you manage your in-home WiFi from any device -- with the xFi App, online at [xfinity.com/myxfi](http://xfinity.com/myxfi) and even with the X1 Voice Remote, just say "Show me my WiFi" to get started.

**Did you know?** Your xFi Gateway is a router and modem in one, delivering the speed, coverage and control you need for the ultimate in-home WiFi experience.

# Tips to optimize your in-home WiFi network

## Placement Matters

Place your xFi Gateway in a centralized spot in your home. Keep it out in the open.

Avoid cabinets, closets, and places that may accidentally get covered up.

## Tighten Your Connections

Cable connections can become loose over time, leading to various service issues. The number one thing you can do to make sure you're getting the best quality Xfinity service is to make sure your connectors, at both the device end and the wall end, are always tight.

## Know Your Devices

Use newer generation devices when connecting over WiFi.

Older model devices may not be able to achieve the fastest-possible speeds.

Xfinity xFi is available to Xfinity Internet customers with a compatible xFi Gateway. Ability to pause limited to home network. Does not apply to WiFi hotspots.
